

PLAY WITH JUNO

Our Digital Colleague takes care of the planning of complex production processes with your defined rules.

ABOUT JUNO

We count on artificial intelligence in production planning and, with our Digital Colleague **Juno**, are bringing a new generation of production planning expertise to companies. Based on defined premises (e.g., cost optimization) **Juno** provides an optimized order sequence. Afterwards, the sequenced orders are distributed to the individual machines, considering certain parameters. The aim is to optimally support and improve the planning and control of complex production processes.

Working with you as a colleague is enormously important for **Juno**, because you set the rules that **Juno** must consider in his "game" of optimal planning. Even if a last-minute change occurs, **Juno** can react quickly and create an adapted production plan designed for the new situation. Experience with **Juno**, how a learning AI application can revolutionize your production planning.

1st AI-BOT ABILITY

Master-Planning / Sequencing:
Optimized order sequence based on premises

2nd AI-BOT ABILITY

Detailed planning/ Scheduling:
Optimized and dynamic scheduling on machines or resources

RESULTS

~80% Reduction of planning effort
~20% improved delivery reliability and resource utilisation

APPLICATION

Production
Supply Chain Management
Operations
